Tópicos

Topics Covered

Docker

Composer

SQLite

PHP

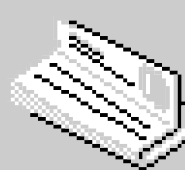

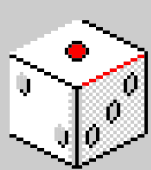

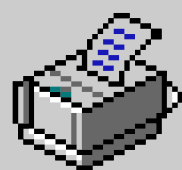

Bootstrap

Start

O que é Docker?

- Docker é uma plataforma de virtualização leve e portátil.
- Permite empacotar, distribuir e executar aplicativos em contêineres isolados.
- Contêineres compartilham o sistema operacional do host, sendo mais eficientes do que as máquinas virtuais.

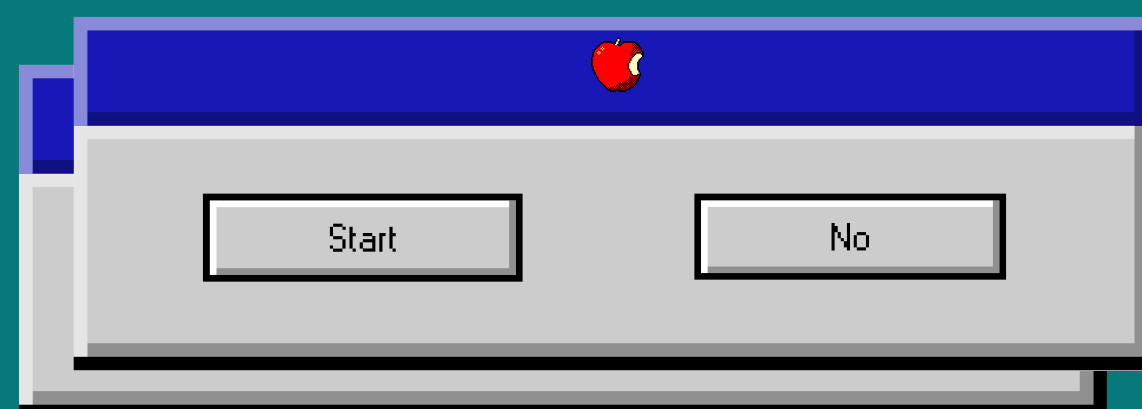

O que é Composer?

- O Composer é uma ferramenta para gerenciar as dependências em projetos PHP.
- Simplifica a inclusão e atualização de bibliotecas de terceiros.
- Automatiza o processo de obtenção, instalação e atualização das dependências.

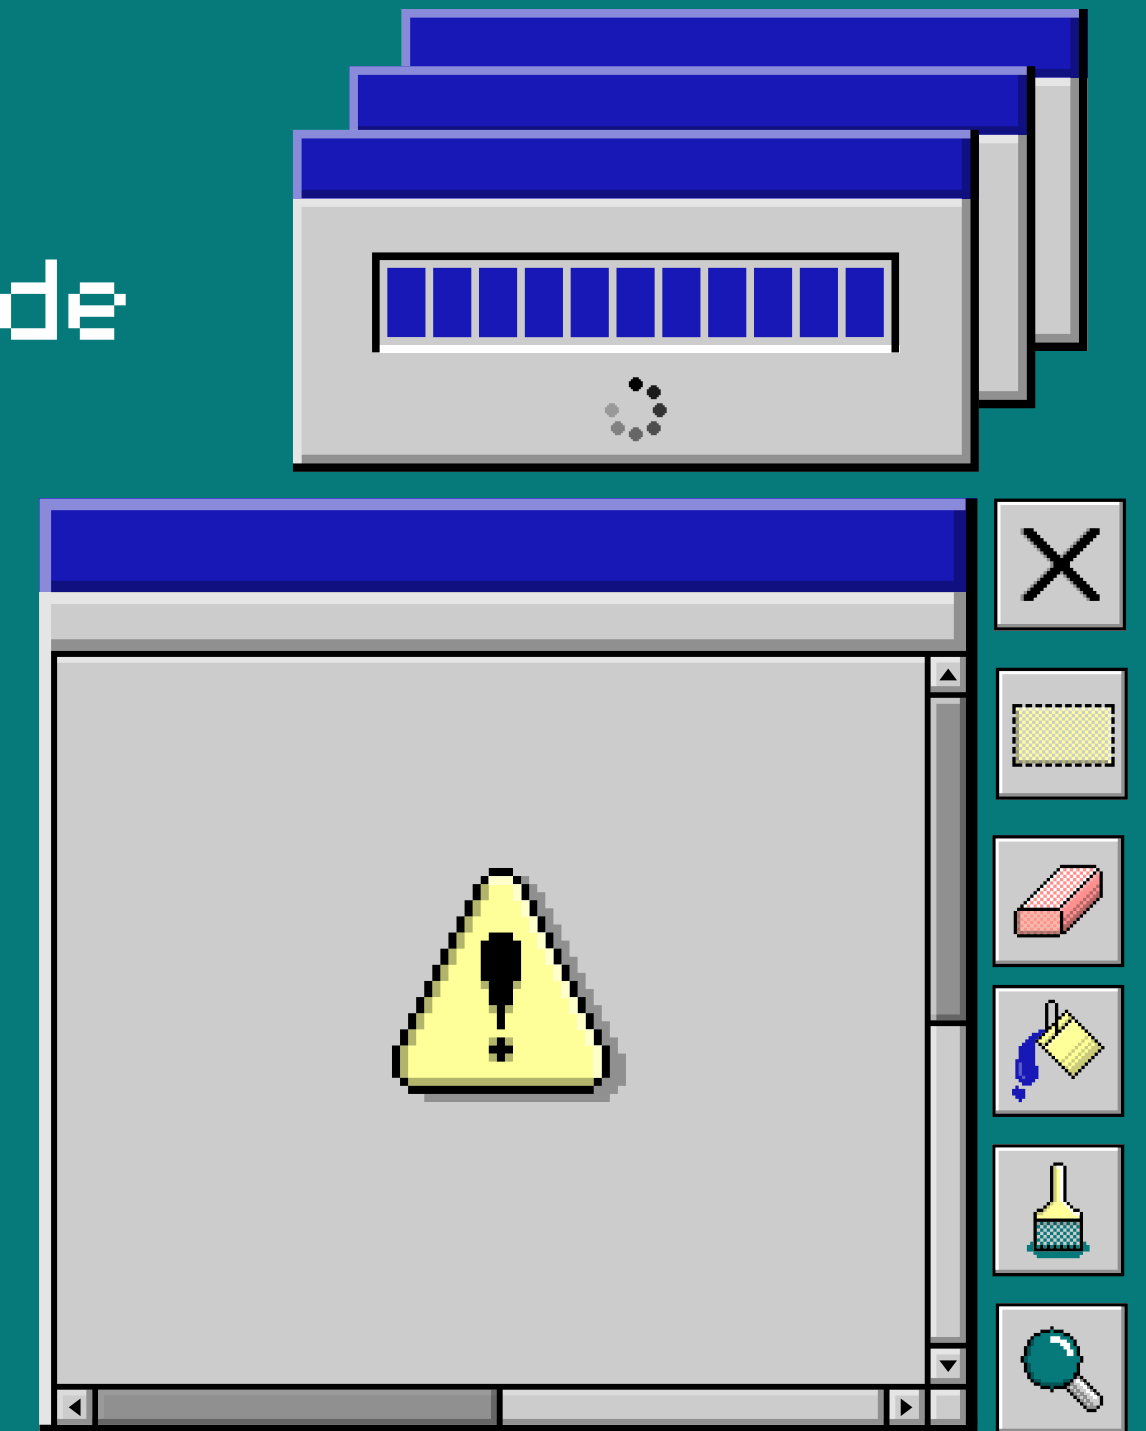

O que é PHP?

- Linguagem de programação para desenvolvimento web.
- Executada no lado do servidor.
- Cria sites dinâmicos e interativos.
- Sintaxe simples e familiar.
- Vasta comunidade de desenvolvedores e bibliotecas disponíveis.

O que é SQLite?

- SQLite é um sistema de gerenciamento de banco de dados leve e embutido.
- Não requer configuração de servidor, sendo executado diretamente nos aplicativos.
- É amplamente utilizado em aplicativos móveis e incorporados.

O que é Bootstrap?

é um framework front-end que fornece estruturas de CSS para a criação de sites e aplicações responsivas de forma rápida e simples. Além disso, pode lidar com sites de desktop e páginas de dispositivos móveis da mesma forma.

Obrigado!
